

# Chronicles from the Magic Forest of COFO 24 in Rome

Ciao Carlo! Some of our friends are missing, do you know what happened to them?

No Elisa, I am worried too! I spoke with Mother Nature, many of her children are disappearing!

**Biodiversity** or biological diversity is the variability among living organisms from all sources.

- 40% of the world's economy and 80% of the needs of the poor derive from biological resources.

- On Earth there are 100 000 000 different species (group of organisms with similar traits).

**Mainstreaming**

**biodiversity** embraces sustainability, equitable use of natural resources and conservation.

**Sustainability** means maintaining the balance between economical, environmental and social values.

**Conservation** is the protection of nature.

Hi friends!  
We know how we can help! We were travelling around the world and mainstreaming biodiversity seems like one of the suggestions!

Great, sounds good.  
But what does it mean?

Right!! I believe that humans should also get all the people that care for us together.

Also, they should enhance Sustainable Forest Management. With that, include other sectors worldwide and remember to involve different ecosystems and stakeholders.

**Fishery**

**Forestry**

**& Agriculture**

Finally, they should communicate with each other like we are doing now!

We help humans in so many ways and it is essential to have a long-term collaboration.
