

MULTILEVEL LAND GOVERNANCE

1990-2000 YEARS OF
DECENTRALIZATION

See as a better tool to be more
efficient → local leaders were
much more likely to be aware
of the problems in their
communities

Sub national governments have
done a of of efforts but still
problems I terms of authority
and power they have + capacity
of funding

Need of coordination →
multilevel, mutisector,
multiactor

Coming out?

- Calls for
- integrated landscape
approaches,
 - multisectoral
initiatives,
 - multistakeholder
platforms

**How REDD+
can come into
land using
decisions**

LEARNING OR JUST
REPACKAGING?

*Decentralization evolves in
multilevel governance*

*Participation evolves in
integrated landscape
initiatives, multistakeholder
processes*

The problem can be solved
if every actor play the same
role in the game and have
the same power in the
decisions
